NCI_CGAP_FTO is a cDNA library constructed from a pool of BIRNA samples from Alveolar Macrophages challenged with different treatments. The library was constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. First strand cDNA synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded cDNA was ligated to an EcoR I adaptor, digested with Not I, and cloned directionally into pT7T3-Pac vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dT)18 tail. The sequence tag for this library is GGCATGCCG. The cell line was provided by Gary W. Hunninghake from the University of IOwa.

NCI_CGAP_FTI is a normalized cDNA library constructed from a pool of 81 RNA samples from Alveolar Macrophages
challenged with different treatments. The library was normalized according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. First strand cDNA synthesis was primed with an oligo-dT primer containing a Not I site.
Double stranded cDNA was ligated to an EcoR I adaptor, digested with Not I, and cloned directionally into pT7T3-Pac vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dT)18 tail. The sequence tag for this library is GGCCATGCCG. The tissue was provided by Dr. Gary W. Hunninghake of the University of Iowa.

NCI_CGAP FTI is a normalized cDNA library constructed from a pool of #81 RNA samples from Alveolar Macrophages

challenged with different treatments. The library was normalized according to Bonaldo, Lennon and Soares, Genome Research, 6: 791-806, 1996. First strand cDNA synthesis was primed with an oligo-dT primer containing a Not I site.

Double stranded cDNA was ligated to an EcoR I adaptor, digested with Not I, and cloned directionally into pT7T3-Pac vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dT)18 tail. The sequence tag for this library is GGCCATGCCG. The tissue was provided by Dr. Gary W. Hunninghake of the University of Iowa.

NCI CGAP FT1 is a normalized cDNA library constructed from a pool of 81 RNA samples from Alveolar Macrophages

challenged with different treatments. The library was normalized according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. First strand cDNA synthesis was primed with an oligo-dT primer containing a Not I site.

Double stranded cDNA was ligated to an EcoR I adaptor, digested with Not I, and cloned directionally into pT7T3-pac vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dT)18 tail. The sequence tag for this library is GGCTATGCGC The tissue was provided by Dr. Gary W.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Tumor Gene Index

NCI CGAP_FTO is a cDNA library constructed from a pool of 81 RNA samples from Alveolar Macrophages challenged with different treatments. The library was constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. First strand cDNA synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded cDNA was ligated to an EcoR I adaptor, digested with Not I, and cloned directionally into pT7T3-Pac vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dT)18 tail. The sequence tag for this library is GGCATGCG. The cell line was provided by Gary W. Hunninghake from the University of Iowa.

NCI_CGAP_FTO is a cDNA library constructed from a pool of 81 RNA samples from Alveolar Macrophages challenged with different treatments. The library was constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. First strand cDNA synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded cDNA was ligated to an EcoR I adaptor, digested with Not I, and cloned directionally into pT7T3-Pac vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dT)18 tail. The sequence tag for this library is GGCCATGCCG. The cell line was provided by Gary W. Hunninghake from the University of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         300

NCI CGAP FTO is a cDNA library constructed from a pool of 81 RNA samples from Alveolar Macrophages challenged with different treatments. The library was constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. Pirst strand cDNA synthesis was primed with an oligo-dr primer containing a Not I site. Double stranded cDNA was ligated to an EcoR I adaptor, digested with Not I, and cloned directionally into pT7T3-Pac vector. The oligonucleotide used to prime the Synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dT)18 tail. The sequence tag for this library is GGCCATGCCG. The cell line was provided by Gary W. Hunninghake from the University of lowa.

NCI CGAP_FrO is a cDNA library constructed from a pool of sI ENA samples from Alveolar Macrophages challenged with different treatments. The library was constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. First strand cDNA synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded cDNA was ligated to an EcoR I adaptor, digested with Not I, and cloned directionally into pT773-Pac vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dT)18 tail. The sequence tag for this library is GGCGATGCGG. The cell line was provided by Gary W. Hunninghake from the University of lows.

/location lib="NGI CGAP FTI"

/note="Organ: Lung; Vector: pT7T3-Pac (Pharmacia) with a modified polylinker; Site_1: EcoR I; Site_2: Not I;

NGI CGAP FTI is a normalized cDNA library constructed from a pool of B1 RNA samples from Alveolar Macrophages

challenged with different treatments. The library was normalized according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. First strand cDNA synthesis was primed with an oligo-dT primer containing a Not I site.

Double stranded cDNA was ligated to an EcoR I adaptor, digested with Not I, and cloned directionally into pT7T3-Pac vector. The oligonuclectide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (AT)18 tail. The sequence tag for this library is GGCTTGCCG. The tissue was provided by Dr. Gary W. Hunninghake of the University of Iowa.

polylinker; Site_1: EcoR I; Site_2: Not I; NCI CGAP_FS1 a cDNA library containing the following tissue(s):
Fibrosarcoma Cell line HT-1088 (ATCC number CCL-121). The library was constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. First strand cDNA synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded cDNA was ligated directionally into pT7T3-Pac vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dT)18 tail. The sequence tag for this
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       360

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ₹
/note="Organ: Lung; Vector: pT7T3-Pac (Pharmacia) with a modified polylinker; Site 1: EcoR I; Site 2: Not I; Not I; Not I GAP FT0 is a cDNA library constructed from a pool of a final samples from Alveolar Macrophages challenged with different treatments. The library was constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. First strand cDNA synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded cDNA was ligated to an EcoR I adaptor, digested with Not I, and cloned directionally into pT7T3-Pac vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dT)18 tail. The sequence tag for this library is GGCCATGCG. The cell line was provided by Gary W. Hunninghake from the University of Iowa.

modified polylinker, Site_I: EcoR I; Site_2: Not I;
NCI CGAP_DH1 is a normalized cDNA library containing the
following tissue(s): VS-8 Cell line from Metastatic
Chondrosarcoma in Lung. The library was constructed
according to Bonaldo, Lennon and Soares, Genome Research,
6:791-806, 1996. First strand cDNA synthesis was primed
with an oligo-dT primer containing a Not I site. Double
stranded cDNA was ligated to an EcoR I adaptor, digested
with Not I, and cloned directionally into pT7T3-Pac
vector. The oligonucleotide used to prime the synthesis of
first-strand cDNA contains a library tag sequence that is
located between the Not I site and the (dT)18 tail. The
sequence tag for this library is AGATCATTGC.

The present sequence is that of human interleukin-1 beta (IL-1B)
allele 2 (+6912), which is a form of the IL-1B gene that contains
clear aposition (see AAASO14). The linearing based on the
this position (see AAASO14). The invention is based on the
identification of this novel allele at marker +6912 of the IL-1B
clear in the C to G transition occurs within the 3 untranslated
region of the IL-1B gene and results in an increased level of IL-1B
credion of the IL-1B allele 1 (+6912). Methods and kits are
protain. Individuals homozygous for the IL-1B allele 2 (+6912)
accumulate approximately 4 times more immunoreactive IL-1B protein
than homozygotes for IL-1B allele 1 (+6912). Methods and kits are
provided for detecting IL-1B allele 2 (+6912), or an allele in
linkage disequilibrium with an IL-1B allele 2 (+6912), and
thereby determining a patient's susceptibility to developing
inflammatory disorders, especially coronary artery disease,
thereby determining a patient's susceptibility, to developing
inflammatory disorders, especially coronary artery disease,
costeoporosis, nephropathy in diabetes mellitus, alopecia areata,
graves disease, systemic lupus erythematosus, lichen sclerosis,
ulcerative colitis, diabetic retinopathy, periodontal disease,
juvenile chronic arthritis, psoriasis, insulin dependent diabetes,
culcerative colitis, diabetic retinopathy, periodontal disease,
lung disease, lung fibrosis, and rheumatoid arthritis (claimed).
Il-1B antegonists that can be used to treat conditions associated
with IL-1B allele 2 (+6912). Transgenic animals are also claimed,
with IL-1B allele 2 (+6912). Transgenic animals are also claimed,
with IL-1B allele 2 (+6912). Transgenic animals are also claimed
confirm the safety and efficacy of candidate therapeutics.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                AGCTATGGAATCAATTTGGACTGGTGTGCTCTTTAAATC 120

This is the 3' UTR of interleukin 1-beta mRNA which contains AU-rich element (ARE) motifs. These ARE motifs are found in genes subject to mRNA instability. Identification of a compound which affects mRNA stability comprises a DNA expression system which in the absence of the test compound is capable of expressing a protein having a detectable signal. The mRNA which codes for the protein, and which is transcribed from the expression system, comprises at least one copy of a mRNA instability sequence. The mRNA is contacted with a test compound the detectable signal is measured in the presence of the test compound and compared with a control. Compounds identified by the new method can be used for the treatment of a disease or medical condition which involves inappropriate mRNA stabilization and/or accumulation and outless the protein expression (claimed) e.g. rheumatoid arthritis or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 429 TITIGATICATIGGICTAATITATICAAAGGGGGCAAGAAGTAGCAGTGICTGTAAAAGA 488

The present invention describes low adenosine (A) content antisense oligonucleotides and compositions (I) comprising them. In the antisense oligonucleotides the A is replaced by a 'Universal' or alternative base.

(I) can have respiratory, bronchodilator, antinflammatory, analgesic, immunosuppressive, antiasthmatic, hypotensive and cytostatic activities. The antisense oligonucleotides and (I) can be used to down-regulate the cypression and or activity of target polypeptides associated with lung/respiratory disorders and malignancies, usch as stimulating and activating peptide factors and transmitters, transcription factors, immunoglobulins and antibodies, antibody receptors, cytokines and chemokines, endogenously produced specific and non-specific enzymes, binding proteins, adenosine receptors, bradykinin receptors, contral nervous system (CNS) and peripheral nervous and non-nervous system creceptors, defensins, growth factors, vascactive peptides and receptors, binding proteins and malignancy associated proteins. The antisense oligonucleotides may be used in this way to treat disorders including respiratory obstruction (especially pulmonary obstruction and/or bronchoconstriction) and/or lung inflammation, allergy(ies) and/or surfactant hypoproduction which are associated with a disease or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Low adenosine antisense oligonucleotide; phosphorothioate; allergy; human; airway disorder; bronchoconstriction; lung inflammation; surfactant depletion; respiratory; bronchodilator; antiinflammatory; immunosuppressive; antiasthmatic; analgesic; hypotensive; cytostatic; respiratory obstruction; pulmonary obstruction; impeded respiration; surfactant hypoproduction; pulmonary vasoconstriction; asthma; RDS; respiratory distress syndrome; pain; cystic fibrosis; allergic rhinitis; pulmonary hypertension; emphysema; pulmonary transplantation rejection; chronic obstructive pulmonary disease; pulmonary infection; bronchitis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   content antisense oligonucleotides which do not receptors during metabolism, useful e.g. for treating

The present invention describes a new composition comprising an antisense oligonucleotide (ON) with low adenosine (up to 15%), which targets nucleic acids involved in bronchoconstriction, allergies, and/or inflammation. The ON can have antinflammatory, antiallergic, antiathmatic, cytostatic and analgesic activities. The compositions are untiathmatic, cytostatic and analgesic activities. The compositions are impaired airways, including lung disease and diseases whose secondary effects afflict the lungs of a subject. They can be used for treating effects afflict the lungs of a subject. They can be used for treating esthme, impeded respiration, respiratory distress syndrome, pain, cystic fibrosis, pulmonary hypertension, emphysems, chronic obstructive pulmonary disease (COPD), and cancers such as leukaemias, lymphomas, carcinomas, and cancers which may metastasise to the lungs, including breast and prostate cancer. The A-containing ONs break down with the release of deoxyadenosine which activates adenosine receptors causing bronchoconstriction and inflammation. AAA3313 to AAA3512 represent the conclective sequences given in the sequence listing from the present invention, which correspond to SEQ ID NO:1 to 185, but the sequences differ from the present convention do not match up with their corresponding SEQ ID NO: sequences invention do not match up with their corresponding SEQ ID NO: sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö

The present invention describes genotyping a nucleic acid sample from a subject to determine at least one allele of an interleukin-1 (IL-1) proinflammatory haplotype. A method has also bee described for determining a subject's susceptibility to developing chronic obstructive airway disease (COAD) or for predicting the rapidity or ultimate progression of a COAD in the subject by: (a) obtaining a nucleic acid sample from the subject; and (b) detecting at least one allele of an IL-1 proinflammatory haplotype in the sample, where detection of at least one of these alleles indicates that the patient has an increased susceptibility to developing COAD. The method is useful for determining the susceptibility of subjects to developing chronic obstructive airway disease (COAD). COAD can be asthma, emphysema, chronic obstructive airway disease (COAD). COAD can be asthma, emphysema, chronic bronchitis or chronic bronchiolitis. The method provides for early identification of chronic obstructive airway disease (COAD), facilitating administration of appropriate treatment at the earliest stage, thereby increasing the probability of a positive outcome. The present sequence represents the human IL-1B gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                8889

The present invention describes low adenosine (A) content antisense oligonucleotides and compositions (I) comprising them. In the antisense coligonucleotides the A is replaced by a 'Universal' or alternative base. (I) can have respiratory, bronchodilator, antiinflammatory, analgesic, immunosuppressive, antiasthmatic, hypotensive and cytostatic activities. The antisense oligonucleotides and (I) can be used to down-regulate the expression and or activity of target polypeptides associated with cartivating peptide factors and malignancies, such as stimulating and activities and antibodies, antibody receptors, cytokines and chemokines, endosenously produced specific and non-specific enzymes, binding proteins, adhesion molecules and their receptors, cytokine and chemokine receptors, adenosine receptors, bradykinin receptors, contral creceptors, and peripheral nervous and non-nervous system (CNS) and peripheral nervous and non-nervous system peptide transmitters, defensins, growth factors, vasocative peptides and receptors, binding proteins and malignancy associated proteins. The antisense oligonucleotides may be used in this way to treat disorders including respiratory obstruction and/or lung inflammation, and/or surfactant hypoproduction which are associated proteins. The and/or surfactant hypoproduction which are associated with a disease or condition selected from pulmonary vasoconstriction, inflammation, allergies, asthma, impeded respiration, respiratory distress syndrome (RDS), pain, cystic fibrosis (CP), allergie (RDB), pain, cystic fibrosis (CP), allergie (RDB), pain, cystic fibrosis (CP), allergie (CDB), pulmonary infections, bronchitis, and antisone election, pulmonary infections, bronchitis, and or rejection, pulmonary infections, the present description or antisense oliconer, and or rejection, pulmonary infections, and or rejection, including respirato
s syndrome; pain; cystic fibrosis; allergic rhinitis; lon; emphysema; pulmonary transplantation rejection; pulmonary disease; pulmonary infection; bronchitis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           pulmonary transplantation rejection, pulmonary infections, bronchitis, and/or cancer. AAF18434 to AAF21543 represent human polynucleotide fragments and antisense oligonucleotides used in the exemplification of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          content antisense oligonucleotides which do not receptors during metabolism, useful e.g. for treating

The present sequence is provided in a specification relating to a method for determining whether a subject has or is predisposed to develop an interstitial lung disease. The method involves detecting an interleukin-1 receptor antagonist (IL-1RN) (+2018) allele 2, a tumour necrosis alpha (TNF-A)(-308) allele 2, or an allele in linkage disequilibrium with either of these two alleles. The method may be used to determine whether a subject has or is predisposed to develop an interstitial pneumonia or a pulmonary fibrosis and other disorders such as rheumatoid arthritis, systemic lupus erythmatosis, Sjogren's syndrome, systemic sclerosis, dermatomyocitis. The method is also used for identifying molecules which can be used as therapeutics for treating interstitial lung disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   comprising

The present sequence is that of human interleukin-1 beta (IL-1B) allele 1 (+6912), which is a form of the IL-1B gene that contains cytosine at position +6912; IL-1B allele 2 (+6912) has guanine at this position (see AA50175). The invention is based on the identification of this novel allele at marker +6912 of the IL-1B gene. The C to G transition occurs within the 3' untranslated cegion of the IL-1B gene and results in an increased level of IL-1B protein. Individuals homozygous for the IL-1B allele 2 (+6912) accumulate approximately 4 times more immunoreactive IL-1B protein than homozygotes for IL-1B allele 1 (+6912). Methods and kits are provided for detecting IL-1B allele 2 (+6912), or an allele in linkage disequilibrium with an IL-1B allele 2 (+6912), and thereby determining a patient's susceptibility to developing inflammatory disease,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
Graves disease, systemic lupus erythematosus, lichen sclerosis, Graves disease, systemic lupus erythematosus, lichen sclerosis, ulcerative colitis, diabetic retinopathy, periodontal disease, juvenile chronic arthritis, psoriasis, insulin dependent diabetes, asthma, chronic inflammatory liver disease, chronic inflammatory lung disease, lung fibrosis, and rheumatoid arthritis (claimed). Identification of the IL-IB allele 2 (+6912) and its involvement in IL-IB averproduction also eables screening assays for identifying IL-IB antagonists that can be used to treat conditions associated with IL-IB allele 2 (+6912). Transgenic animals are also claimed, and can be used to identify IL-IB agonists and antagonists, or to confirm the safety and efficacy of candidate therapeutics.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        GCCTAGITTITAATAGCTATGGAATCAATTCAATTTGGACTGGTGTGCTCTTTTAAATC

antisense oligonuclectide (ON) with low adenosition comprising an artisense oligonuclectide (ON) with low adenosition (up to 15%), which targets nucleic acids involved in bronchoconstriction, allergies, and/or inflammation. The ON can have antiinflammatory, antiallergic.

C antiasthmatic, cytostatic and analgesic activities. The compositions are useful for the treatment of diseases associated with inflammation, impaired airways, including lung disease and diseases whose secondary ceffects afflict the lungs of a subject. They can be used for treating e.g. ischaemic conditions, pulmonary vasoconstriction, allergies, asthma, impeded respiration, emphysema, chronic obstructive (ibrosis, pulmonary hypertension, emphysema, chronic obstructive pulmonary disease (OCDD), and cancers such as leukaemias, lucluding breast and prostate cancers which may metastasise to the lungs, including broast and prostate cancer. The A-containing ONs break down with the release of deoxyadenosine which activates adenosine receptors causing bronchoconstriction and inflammation. APA32313 to APA35312 represent the invention, which correspond to SEQ ID NO:1 to 2815, and then the last (SAA32223 to APA3392) are specifically claimed ONS from the present invention. N.B. Sequences given in the disclosure of the present invention do not match up with their corresponding SEQ ID NO: sequences

                                                                                                                                                                                                                                                                     The present invention relates to a new method for determining whether a subject has or is predisposed to developing a disease or condition that is associated with an IL (interleukin)-1 inflammatory haplotype, comprises detecting at least one allele of the haplotype, where the presence of the allele indicates that the subject is predisposed to the development or has the disease or condition. The method is useful for determining whether a subject has or is predisposed to inflammatory disease, a degenerative disease, an immunological disorder, an infectious disease, trauma induced disease, or cancer. The above conditions associated with an IL-1 inflammatory haplotype can be treated or prevented by administering a therapeutic that compensates for a causative mutation that is in linkage diseaulibrium with at least one IL-1 polymorphism.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         180

                                                                                                                                                                                                                                                                                                                                                                                                      The present sequence is given in a specification relating to a method for determining whether a subject has or is predisposed to developing an arterial restenosis. The method comprises detecting a restenosis associated allele (RAA) in a nucleic acid sample from the subject, where detection of the RAA indicates that the subject has or is predisposed to the development of a restenosis. The restenosis associated allelic pattern permits the diagnosis of occlusive cardiovascular disorder. The diagnosis allows the most suitable treatment methods for restenosis to be used e.g. selecting therapies for initial vascular stenosis most likely to avoid subsequent stenoses. The detection methods identify restenosis therapeutics, agonists and antagonists, (proteins, peptides, e.g. anti-sense, ribozyme and triplex nucleic acids) which are used to treat restenosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ent pregnancy loss; immunologic reproductive failure; in-lbeta; IL-lbeta; human; ds.

                                                                                                                                                                                                                              Evaluating risk of unexplained recurrent pregnancy loss in a subject, by testing presence of a variant in interleukin-1 beta promoter region and/or in CD46 gene intron 1 region in a sample obtained from the
                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to a method for evaluating and treating risk of unexplained recurrent pregnancy loss (URPL) in a subject suspected of having immunologic reproductive failure. The method involves testing a sample obtained from the subject for the presence of a variant in the human interleukin-lbeta (IL-lbeta) promoter region, and/or a variant in the CD46 gene intron 1 region, where the presence of the variant, indicates an elevated risk of developing recurrent pregnancy loss. The present sequence is human prointerleukin-1 beta (IL-1 beta) gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     180

The present invention describes low adenosine (A) content antisense oligonucleotides and compositions (I) comprising them. In the antisense oligonucleotides the A is replaced by a 'Universal' or alternative base. (I) can have respiratory, bronchodilator, antiinflammatory, analgesic, immunosuppressive, antiasthmatic, hypotensive and cytostatic activities. The antisense oligonucleotides and (I) can be used to down-regulate the expression and or activity of target polypeptides associated with lung/respiratory disorders and malignancies, such as stimulating and cativating peptide factors and transmitters, transcription factors, immunoglobulins and antibodies, antibody receptors, cytokines and chemokines, endogenously produced specific and non-specific endomes, chemokine receptors, adenosine receptors, bradykinin receptors, central or nervous system (CNS) and peripheral nervous and non-nervous system companies, growth factors, bradykinin receptors, central cransmitters, defensins, growth factors, vasocative peptides and receptors, binding proteins and malignancy associated proteins. The antisense oligonucleotides may be used in this way to treat disorders and/or bronchoconstriction) and/or lung inflammation, allergy(ies) and/or surfactant hypotroduction which are associated with a disease or condition selected from pulmonary vasoconstriction, inflammation, allergies, asthma, impeded respiratory vasoconstriction, inflammation, callergies, asthma, impeded respiratory vasoconstrictions, bypertension, emphysema, chronic obstructive pulmonary disease (CPD), hypertension, emphysema, chronic obstructive pulmonary disease (CPD), hypertension, emphysema, chronic obstructive pulmonary vieterions. ntation rejection, pulmonary infections, bronchitis, 18434 to AAF21543 represent human polynucleotide sense oligonucleotides used in the exemplification of 0; Gaps Query Match 82.2%; Score 194; DB 21; Length 29433; Best Local Similarity 100.0%; Pred. No. 1.2e-85; Matches 194; Conservative 0; Mismatches 0; Indels 0; 8714 A; 6519 C; 5920 G; 8278 T; 2 other; the present invention allergies, asthma, in (RDS), pain, cystic f hypertension, emphyse pulmonary transplants and/or cancer. AAF184 fragments and antiser Sequence 29433 BP;

Lennon and Soares, Genome Research, 6:791-806, 1996. First strand cDNA synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded cDNA was ligated to an EcoR I adaptor, digested with Not I, and cloned directionally into pT7T3-Pac vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dT)18 tail. The sequence tag for this library is AGATCATTGC.

/note="Corgan: colon; Vector: pT7T3D-Pac (Pharmacia) with a modified polylinker; lst strand cDNA was prepared from modified polylinker; lst strand cDNA was prepared from RER+ colon tumor, and was then primed with a Not I - oligo(dT) primer. Double-stranded cDNA was ligated to Eco RI adaptors (Pharmacia), digested with Not I and cloned into the Not I and Eco RI sites of the modified pT7T3 vector. Library is not normalized. Library was constructed by Bento Soares and M. Fatima Bonaldo (Soares4).

according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. First strand cDNA synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded cDNA was ligated to an EcoR I adaptor, digested with Not I, and cloned directionally into pT7T3-Pac vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dT)18 tail. The sequence tag for this library is AGATCATTGC.

/note="Vector: pT7T3-Pac (Pharmacia) with a modified polylinker; Site_1: EcoR I; Site_2: Not I; NCI CGAP_FSI is a cDNA library containing the following tissue(s): Fibrosarcoma Cell line HT-1088 (ATCC number CCL-121). The library was constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. First strand cDNA synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded cDNA was ligated to an EcoR I adaptor, digested with Not I, and cloned directionally into pT7T3-Pac vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (GT)18 tail. The sequence tag for this
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Homo sapiens

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               \dot{\delta}
differentiated (4 pooled tumors, including primary and metastatic) "
/dev_stage="adult"
/lab_host="DH10B (phage-resistant)"
/note="Organ: lung; Vector: pT7T3D-Pac (Pharmacia) with a modified polylinker; 1st strand cDNA was prepared from pooled lung tumor tissue, and was then primed with a Not I - oligo(dT) primer. Double-stranded cDNA was ligated to Eco RI adaptors (Pharmacia), digested with Not I and cloned into the Not I and aco RI sites of the modified pT7T3 vector. Library went through one round of normalization. Library constructed by Bento Soares and M. Fatima Bonaldo. "

polylinker; Site=1: EcoR I; Site=2: Not I; NCI CGAP_FS1 is a cDNA library containing the following tissue(s):
Fibrosarcoma Cell line HT-1088 (ATC number CCL-121). The library was constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. First strand cDNA synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded cDNA was ligated to an EcoR I adaptor, digested with Not I, and cloned directionally into pT7T3-Pac vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Homo sapiens
